Street sweeper

Street sweeper

Street Sweeping Program

Location:	Throughout South Burlington
Problem:	Sediment and debris from cars, trucks, and littering collects on the sides of streets in South Burlington. Heavy rains can wash this debris down storm drains and into streams. Larger debris can clog up storm pipes and cause flooding. Smaller particles can flow into our lakes, rivers, and streams, harming fish and wildlife.
Benefit:	Street sweeping cleans streets and collects debris before it makes it into our water resources, keeping our water healthy and clean.
Description:	The city owns two street sweepers that use vacuum power to collect debris off of the streets. Brooms sweep up debris that is then vacuumed into a large tank. Street sweepers use only a small amount of water to control dust.
Dates/Timeline:	The City of South Burlington sweeps all its streets at least twice per year. Busier streets are swept more frequently.
Funding Sources:	Stormwater Utility Fund
Best Management Practices:	System Maintenance
